

L^AT_EX and Git Tutorial

Caglar Ari

June 6, 2014

Abstract

This a sample L^AT_EX document that explains some of the L^AT_EX commands

1 Introduction

- You can use commands like `ls`, `cd`, `mkdir` in git shell.
- `git init`
- `git add filename.tex`
- Create a first saved version, `git commit -a -m "comment"`
- `git log`
- When you call `git log` you get weird numbers near commit
- `git show ebd45 --word-diff=color`

Git Commands

- `git init`
- `git commit -m "comment"`
- `git commit -a -m "comment"`
- `git log`
- `git show`
- `git add '*.txt'`

Useful Things to know about Git

- file names are case sensitive
- use github software to see the changes in gui
